

### **Color Scheme:**

primary-color: #15141a;

accent-color: #FF0099;

contrast-color: #6f23ae;

**Primary Font:** system-ui

**Fallback Fonts:** -apple-system, BlinkMacSystemFont, 'Segoe UI', Roboto, Oxygen, Ubuntu, Cantarell, 'Open Sans', 'Helvetica Neue', sans-serif;

**Layout:** The website was designed based on the current trend and the rise of 'Dark Theme' site. It displays a modern look with the use of 'Flex box' and 'grid' to provide excellent user experience. Keeping browser support and viewport size in mind, three different breakpoints were added.

With the use of 'position' CSS property, modern look was added by shifting some of the component's usual flow in the DOM. This gives a better user experience compared to traditional flow of elements.

**Deviation from initial design:** No changes were made from the initial design.

**Testing:** To test the website, Google Chrome and Firefox's dev-tool were used. Google Chrome's dev-tool allowed to check the contrast of colors of different elements using the 'inspection' tool. It also allowed simulations for different accessibility features e.g. 'reduced motion' to test if

*@media (prefers-reduced-motion: no-preference) {}* CSSproperty works in case a user has blocked all kinds of animation for disability purposes. Firefox dev-tool allows enhanced ‘flex’ and ‘grid’ view which makes debugging easier. Browser support for HTML tags and CSS property was testing using the documentation of [MDN web doc](#) Additionally, a *Lighthouse* report was generated to test the website’s performance and accessibility.
